

n. m. — the old surveyor's measure of the real.

Read the real.

Proof moves money.

The asset layer for AI

Verified asset state for every decision that moves money.

Every decision that releases, prices or protects money on a physical asset should rest on a reading — not a declaration.

ILLUSTRATION

A phone held up to a heat pump nameplate; beneath it, one sealed line: PASS · qualified · logbook. No dashboard, no diagram — the gesture and the proof.

The physical world was never made readable for AI.

\$75 trillion of assets are decided on from declarations.

A person is resolved a thousand times a day. An asset is never resolved once.

There is no asset layer.

ILLUSTRATION

Left: a dense identity graph around one person (cookie, passkey, LEI, agent). Right: one boiler, alone, with ten disconnected labels — CRM, ERP, warranty, field service — none linked.

Unify the asset the way the world unified the person.

Read • Verify • Consent • Attest • Logbook

One substrate — Resolve — every act
lands on the same referent.

Opposable: holds against the reader and
against third parties.

Every significant asset keeps a logbook.

ILLUSTRATION

Five verbs as a horizontal rail; beneath it one persistent referent (the asset) with acts stacking into a logbook over time. One reader silhouette: customer, technician, inspector, agent.

One engine reads the real.

Any ruleset, any phone, on the asset —
~1 ms, no network.

Not another model. The seal proves the
record; the rule proves the state.

Rules change, facts don't: each act carries
its rule version.

3–5 patent families — A5.

ILLUSTRATION

*One real attestation card, verbatim: asset · ruleset@version
· result · device attestation · position integrity · consent ·
qualified seal · logbook entry. Monospace, sealed.*

Priced like infrastructure — pay per verified outcome.

Verify: €2–20 per reading. Never a percentage.

Sold to the risk owner. Run by whoever stands in front of the asset. Wired by the field software.

Phase 2: a warranted tier, priced from risk — A10.

ILLUSTRATION

The agent's view: a five-line API call — `verify_asset(asset, ruleset@version) → { status, tier, attestation, logbook }`.

Dark card, monospace. Nothing else.

Fraud pays the first reading.

Heat pumps • CEE • France — 100% on-site checks by 2028.

One asset, one payer, one ruleset. The visit stays; the payer pre-screens first.

Beat 1 fraud pays • Beat 2 the logbook accrues • Beat 3 agents pay.

Payer in dialogue: [name • date]

ILLUSTRATION

The payer console, reduced to one row: work site #a7f3 — heat pump — PRE-SCREEN vs BAR-TH-171@2026 — 'Do not submit, fix first: nameplate / declared model' — signed, Arpent rail.

Everyone reads. Nobody makes the reading opposable.

Who reads • who records • who
orchestrates • who certifies.

Vision models, registries, workflow
software, identity — each keeps its own
copy. None is the neutral referent.

*Regulation commoditizes reading. It
cannot commoditize opposability.*

ILLUSTRATION

A 2×2: axis X 'reads the asset' (no → yes), axis Y 'opposable at capture' (no → yes). Vision models bottom-right, registries and workflow software left, QTSPs top-left, Arpent alone top-right. Names in appendix A8.

The engine and the world.

Gregory Labrousse — founder & CEO. 20 years making the real world machine-readable.

Bruno Antunes — co-founder & CTO. On-device reading in ~1 ms, in production.

Make the physical world opposable.

ILLUSTRATION

Two portraits, same size, no titles under them. Beneath: three client marks — IKEA · Fnac Darty · LVMH maisons — as the traction line.

**€2-20 against €150-400 — and four floors,
never summed.**

**Acts €1.8 bn EU · Functions per logbook ·
Flows ~\$5 T/yr · Stock \$75 T**

Pilot KPIs, day one: cost saved / fee > 5× ·
false-pass rate · referral rate · functions
per logbook.

The wedge proves; the rungs pay.

ILLUSTRATION

A four-step ladder, each step labelled with its floor and its single use ('the TAM', 'the flywheel', 'the ROI denominator', 'why it matters'). No sum at the top.

Own the asset layer.

Seed proves G1 + G2, with G3 — a named carrier — set in motion.

Ask: [€ amount] · [runway] · [use of funds]
· milestones [G1 date · G2 date].

Advance on proof, not on calendar.

ILLUSTRATION

Four gates as a horizontal timeline without dates: G1 · G2 · G3 (highlighted, 'the trigger') · G4. A single marker: 'we are here'.

Appendix A1 · Denominator — four floors

Field	To fill — source · status
A · Acts (the TAM)	€13–23 bn/yr world · €1.8 bn EU bottom-up — matrix V3.3 [attach top-5 build-up]
B · Functions per logbook (the flywheel)	1.0 → 1.35 acceptances/op — [pilot metric definition]
C · Flows (ROI denominator)	≈ \$5,000 bn/yr — [components · sources]
D · Stock (why it matters)	≈ \$75 T = equipment ~\$50 T [source] + vehicles \$15–20 T [source] + durables \$10–15 T [source]; real estate ~\$380 T excluded — [Savills 2023 or equivalent]
Count	≈ 400 M significant assets EU ex-vehicles · ≈ 750 M with vehicles and meters — [derivation]

Never summed. Figures enter the master table only after sourcing and pilot validation.

Appendix A2 · US — insurance first

Field	To fill — source · status
State-mandated mitigation pricing	CA · CO · LA · FL — [statutes · dates] · FORTIFIED discounts \$1,250–2,198/yr [source]
Utility ratepayer DSM	\$8 bn/yr · \$80–240 M field-verification pool [source]
Pricing · TAM	1.5–2× per act · \$1.2 bn ARR central [derivation]
Regime	Signed evidence + ISO 17020 (ILAC/IAF) + contract — no QTSP equivalent. We say so first.
Sequencing	Gated on G2 — [date]

Appendix A3 · Deciders — job, pain, fee, size

Field	To fill — source · status
Aid payer / regulator (AT — wedge)	Comply · fraud, €150–400 control · fee: payer / installer / control subcontractor · size []
Insurer (AS)	Settle · declared claim, late expertise · size []
Lender / lessor (BQ · VH)	Commit · Execute · collateral never seen · size []
Retailer / brand (RD)	Settle · Execute · returns, warranty — in production · size []
Operator / maintainer (MM · UT · IN)	Operate · periodic check redone · size []
Landlord (IM) · Installer (supply) · Agent (AG)	Commit · Prove & keep · Consult · size []

Sizes from matrix V3.3 — [À CHIFFRER].

Appendix A4 · Category comparables — « X for AI »

Field	To fill — source · status
Web / search for AI	Parallel \$2 bn (Apr 2026) · Exa ~\$700 M [verify]
Model gateway	OpenRouter → Stripe > \$7 bn (Sep 2026)
Payments for AI	Stripe \$159 bn · Plaid \$6.1 bn [verify]
Identity resolution (the mirror)	\$10–15 bn market · LiveRamp ~\$800 M rev. at ~2× sales — probabilistic, per-record, no liability: none of which Arpent is
Physical AI · Trust for AI	PI \$5.6 bn · Figure ~\$39 bn [verify] · 'trust' = the cell to avoid
Asset for AI	nobody — the empty cell

Multiples ASSERTED — document before investor use.

Appendix A5 · Intellectual property

Field	To fill — source · status
Patent families (3–5)	capture integrity opposable to the reader · ruleset versioning in the act · on-device compilation · attested sequence — [filing status · dates · counsel]
Engine assignment	assigned to Arpent — [agreement date] · dated code deposit [APP / bailiff · date]
Freedom to operate	captive registries, remote inspection patents — [FTO study · date]
Open standard	proof of asset-state as credential class — ToIP / UNTP / CEN, FRAND — [working group · contact]
Table-stakes answer	if a phone OS ships attested capture natively: rail, liability, qualified tier remain

Appendix A6 · Three regimes of opposability

Field	To fill — source · status
1 · Legal presumption (EU/EEA)	qualified seal, timestamp, ledger — eIDAS 2 · [QTSP RFQ status]
2 · Accreditation (worldwide)	ISO 17020 via COFRAC — ILAC/IAF MRA · [timeline post-G2]
3 · Contractual / evidentiary (everywhere)	signed evidence, admissible, priced by the carrier
Local qualified regimes	ICP-Brasil · UAE PASS · CH — [to verify by country]

The tier is a field of the act (signed | accredited | qualified), not a border of the rail.

Appendix A7 · Standards stack

Field	To fill — source · status
Identifier	EN 18219 · DID (did:web) · GS1 Digital Link / SGTIN / GIAI · IEC 61406
Container & seal	JAdES (ETSI TS 119 182) · EN 18246 ESDC [Sep 2026] · W3C VC 2.0
Event	GS1 EPCIS · UNTP Conformity Credential / Traceability Event
Position & device	Galileo OSNMA · App Attest / Play Integrity · Secure Enclave / StrongBox
Presentation & consent	OID4VP/VCI · DIDComm · FIDO PXP · DSP2 consent · FHIR Consent
Issuer & trust	GLEIF LEI / vLEI · EU Trusted List · ToIP TRQP
Birth of the object	EU DPP Registry (Jul 2026) · battery passport (Feb 2027) · CPR DPP [date]

Appendix A8 · Registry & competitor landscape

Field	To fill — source · status
Who reads	Tractable · Bdeo · WeProov · generic VLMs · proptech (Homepad, Check & Visit, OpenSpace, Built) — channels
Who records	Verisk · Solera · CARFAX · DPP platforms · EAM (Maximo, SAP PM)
Who orchestrates	ServiceNow · Salesforce FSL · Guidewire · Praxedo
Who certifies	iProov · eIDAS 2 wallets · QTSPs · inspection bodies
Graphs	Graas · Affinidi / DTG · Google Knowledge Graph — know the SKU, the issuer, the relation; never the state

Appendix A9 · Doctrine — state, lifecycle, value chain

Field	To fill — source · status
State — the atom	one reading, one instant, one rule: the act (billed, patented, sealed)
Lifecycle — the molecule	the logbook: every decision resolves the asset again; the logbook is what the resolutions add up to
Value chain — the medium	manufacturer · installer · payer · insurer · lender · buyer · recycler
Two economies	asset commerce (every exchange — the \$75 T) · asset support (every act between exchanges)
One reading, every entitlement	KYC + KYAS = the entitlement — [Revolut / lender pilot status]

Appendix A10 · Phase 2 — the warranted tier

Field	To fill — source · status
What is insured	the reading, not the asset — the carrier reimburses if the act was wrong, up to a cap
Trigger	G3 — [carrier / broker name · status · date]
Formula	premium = Σ (amount acted upon) $\times$ rate; rate 0.5-2 % [broker technical note]; Arpent = tier surcharge + 10-20 % originator share
Wedge France	€5-7 bn/yr acted upon → premium €25-140 M/yr → Arpent €5-25 M/yr
Europe · Verticals	$\times 4-5 \rightarrow \text{€}100-700 \text{ M/yr} \cdot 1-5 \text{ \% of flows} \rightarrow \text{\$}250 \text{ M}-5 \text{ bn/yr} — \text{gated on G4}$

All figures HYPOTHESIS until a broker's technical note. Percentage legitimate on the risk layer, forbidden on the rail.
